The 904S, more than anything else we produce, is the answer to situations that seem impossible.

The right type of 904S can tackle the steep hills and gravel roads or zip through the parkways and train stations. This is the base we use for our most challenging users and environments, with versions supporting weight capacities of 700lbs and packages designed for adventures off the beaten track.

The 904S makes mobility possible no matter what your circumstances.

Family Features

- Our patented chain drive transmission allows for unparalleled performance and durability, as well as the ability to tailor each drive train to the individual requirements of the user.
- An A-Frame front frame allows for side to side articulation as well as dampened vertical movement for a smooth, comfortable ride.
- The adjustable frame and perpendicular front battery allow for a footprint now less than 32" long and only 24.5" wide, as well as easy and quick access to the batteries and controller.
